

PROJECT DELIVERY & HANDOVER REPORT

Naveed Reputation — Google Review Removal & Online Reputation Platform

Production Domain: https://naveedreputation.com	Date: October 7, 2026
Repository: github.com/muhammadtalha-404/orm-website	Status: Live & Deployed

Executive Summary: The **Naveed Reputation** web application has been designed, built, localized, and deployed into a live production environment. The platform is engineered for high-converting B2B lead generation, targeting businesses requiring legitimate, policy-compliant removal of negative and defamatory Google reviews. The system includes full English and Dutch localization, Meta Pixel tracking, an automated GitHub Actions CI/CD deployment pipeline to cPanel hosting, and direct integration with WhatsApp and custom domain email forwarding.

System Deliverables & Architecture

Component	Technical Specification	Status
Frontend Framework	React 19 + Vite (Single Page Application)	Live
Design System	Vanilla CSS (Corporate Navy & Clean Slate #023052)	Live
Production Hosting	cPanel Apache Web Server via public_html	Live
Live Domain & SSL	naveedreputation.com (256-Bit SSL Secured)	Live
CI/CD Pipeline	GitHub Actions build & FTP deploy on push (~25s)	Active
Internationalization	Bilingual engine supporting English (EN) & Dutch (NL)	Active
Meta Ad Tracking	Meta Pixel ID 4052897355004160 (PageView, Lead, Contact)	Active
Communications	contact@naveedreputation.com + WhatsApp (+92 310 7791895)	Active

1. Funnel Architecture & User Experience

- **Guarded Shield Hero Visual:** Custom visual theme illustrating defense against malicious reviews with verified 10,000+ review removal social proof badge.
- **7-Step Review Audit Funnel (/getstarted):** Interactive questionnaire capturing business category, review age, volume, impact, timeframe, and client contact details.
- **Direct WhatsApp Routing:** Form submissions pre-populate a structured consultation summary directly in WhatsApp routed to specialist representatives.
- **Responsive Navigation:** Off-canvas mobile menu with nested accordions for 8 Industries and 3 Content Removal services; logo click smoothly scrolls to top.

2. Bilingual Localization Engine (i18n)

The platform features an internal translation engine supporting instant client-side switching between **English (EN)** and **Dutch (NL)** without page reload:

- 100% of headers, footers, mobile drawers, and trust badges.
- 8 dedicated industry landing pages and 3 content removal service pages.
- Full educational blog posts and interactive FAQ accordions.
- The complete 7-step Get Started wizard persists user selections seamlessly during language changes.

3. Marketing & Ad Tracking Infrastructure (Meta Pixel)

Integrated with **Meta Events Manager** under Pixel ID **4052897355004160** to optimize campaigns and train conversion algorithms:

- **PageView:** Fires automatically on initial page loads and across React Router SPA route transitions.
- **Lead:** Triggers automatically when a visitor completes the 7-step review audit request on /getstarted.
- **Contact:** Triggers when users click primary or FAQ WhatsApp consultation buttons.

4. Automated CI/CD Pipeline (GitHub Actions)

The production codebase is linked to github.com/muhammadtalha-404/orm-website. Any future commit pushed to the main branch automatically triggers a GitHub Actions runner that compiles the Vite project and syncs the distribution files directly into cPanel public_html via FTP in ~25 seconds with zero downtime.

5. Handover Sign-off Checklist

- ✓ Production build verified clean with zero compile warnings
- ✓ Apache .htaccess configured to prevent 404s on SPA route refreshes
- ✓ Bilingual toggle verified across all desktop and mobile views
- ✓ Meta Pixel tracking verified for PageView, Lead, and Contact events
- ✓ Automated GitHub Actions CI/CD deployment operational and verified live
- ✓ Inbound forwarder active for contact@naveedreputation.com to Gmail
